Engineering and application experience

Jason joined TECO in July 2025. Before joining our team, he worked as a Mechatronic Engineer at Rogers Industries from 2022 to 2024, defining automation workflows, selecting equipment, preparing project proposals and carrying out system integration and commissioning.

Get the right information for your application

For a drive enquiry, provide the motor nameplate, supply details, driven load, operating duty and control requirements. Our team can use those details to direct your question to the appropriate product and application support.

Explore the range and get support

- Drive and control ranges
- Our technical authors

For equipment-specific requirements, use the documentation for the exact model and installation. Contact our team if you need help confirming the details.
